

Project Scope Document

Project Title	Dive Log Website
Description	A web app where the user can upload data from a dive computer in xls format, and also add extra data eg notes, to record a diary of SCUBA dives. Will use React frontend and Spring backend.
Why?	I'd like to learn how to do it and also I'd like to use it.
MVP Acceptance Criteria	<ol style="list-style-type: none">1. A working, single user, web app for recording dive logs.2. User can upload some data from dive computer in xls format.3. User can add more data, eg weather conditions that day.
Potential Extensions	<ol style="list-style-type: none">1. User can record test dates for equipment and will be notified when test date is due.2. User can see graphical dive profile based on data imported from computer.3. Get it to run on public cloud, eg AWS.
Risks	<ol style="list-style-type: none">1. I've never tried to import data into a Java program before, will have to learn.2. I've never tried to use notifications/scheduled emails before. Will have to learn how to do it.
Exclusions	Will not have to have more than one user.
Prerequisites	Setting up React and Spring development environments.
